

Waipara School BOT Property Report 2021

- School waste water system installed – this necessitated the removal of the very old (and huge) trees on the southern boundary. A work in progress at this point, with grounds remediation to take place early next year.
- School house new waste water system installed. Grounds remediation to happen early 2022.
- School house new heat pump installed.
- School house chimney cleaned out.
- To clean out gutters on school buildings.
- Carried out regular school house inspections.
- New liner installed into the pool which necessitated new pipework from the pump. This will save us having to paint the pool in the future.
- The wording has been changed on our large school sign by the dental clinic. This needs to be resited.
- Block Two classroom roof, that of the sheds, the wee bus shed and the dental clinic are to be painted over the summer hopefully. Overdue for a paint.
- A robotic vacuum cleaner was purchased for the pool as the new liner has rendered our old vacuuming system unable to be used.
